**Re Item V.**

- 1 The following documents are referred to in this communication:  
D1 : US 4 762 027 A (FAGIOLINI ET AL) 9 August 1988 (1988-08-09)  
D2 : DE 32 46 079 A1 (UMBACH,ALBERT) 14 June 1984 (1984-06-14)
- 2 Document D1, which is considered to represent the most relevant state of the art, discloses a device for sharpening chain saw teeth where the chain is not to be taken off the chain saw blade for sharpening. The subject-matter of claim 1 differs from a device according to D1 among other in that a click spring guard is located on a pressure member comprising a pair of shoulders arranged in a way that one of them holds a tooth to be sharpened when the click spring guard cooperates with a click bulge.
  - 2.1 The subject-matter of claim 1 is therefore novel (Article 33(2) PCT)  
The problem to be solved by the present invention may be regarded as providing a simple and reliable holding of a tooth during sharpening.
  - 2.2 The solution to this problem proposed in claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons:  
Known sharpening devices hold a tooth by means of movable elongated elements (D1: Fig.2, ref. no. 9; D2: Fig.1, ref. no. 27).
  - 2.3 Claims 2-9 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
